

Corrosion and Heat Resistance

Hydro-Service® Chains

Hydro-Service® chains possess a unique dual coating that offers superior corrosion protection compared to nickel or zinc plating. These chains perform exceptionally well in freshwater, saltwater, or other mild corrosive conditions. The strength and working load values of Hydro-Service® chains are the same as our standard series roller chains.

300 Series Stainless Steel Chains

SS series stainless steel roller chains are made from AISI type 304 stainless steel to provide excellent corrosion protection. These versatile chains also operate successfully over a wide range of temperatures. The 304SS series is our standard stainless steel product.

600 Series Stainless Steel Chains

The PHSS series offers improved wear resistance and only slightly reduced corrosion resistance than our standard 304SS series chains. Precipitation-hardened pins and rollers combine with special nitrogen treated in austenitic stainless steel bushings to provide excellent resistance to galling — a problem found in other chains that use precipitation-hardened 600 series stainless steel pins and bushings.

316 Series Stainless Steel Chains

316SS series chains use parts made from AISI type 316 stainless steel for superior corrosion and heat resistance for the most difficult applications.

Nickel-Plated Chains

Nickel-Plated chains are well suited for outdoor service and/or mild corrosive applications. All components are plated prior to assembly to ensure uniform coverage.

Materials of Component Parts

Stainless Steel	Pin	Bushing	Roller	Link Plate
300SS	AISI 304	AISI 304	AISI 304	AISI 304
316SS	AISI 316	AISI 316	AISI 304	AISI 304
600SS	17-4 PH SS	17-4 PH SS	AISI 304	AISI 304

Performance of Corrosion Resistant Chains (Best = 1)

Chain	Corrosion Resistance	Temperature Resistance	Magnetism	Wear Resistance
Hydro-Service®	4	4	Magnetic	1
316SS	1	1	Non Magnetic	3
300SS	2	2	Slightly Magnetic	3
600SS	3	3	Magnetic	2
Nickel-Plated	5	4	Magnetic	1

Powerful protection against corrosion

Renold Hydro-Service® Chain is specially coated to stand up to wet, humid, even saltwater operations. This chain lasts up to 30 times longer than conventionally coated chains without the risk of hydrogen embrittlement. If you need to run in wet environments, choose Hydro-Service®.

Safety Coated for Your Operation

All components of Hydro-Service® Chains are mechanically coated prior to assembly to provide complete coverage and protection to all vital surfaces, including the pin/bushing interface. Mechanical plating maintains the integrity of the chain without risking the embrittlement that conventional plating can cause.

Unlike conventional zinc or nickel platings, Hydro-Service® coating will not chip, flake, or peel. Unlike other coatings, Hydro-Service® contains no hexavalent chromium, a known carcinogen. Protect your processes and your people with Hydro-Service® Chains.

- Maximum corrosion resistance
- More than 30 times the corrosion protection compared with conventional surface treatments
- Same strength and working loads as carbon steel chains

Lab Tests Confirm Corrosion Protection

60-day Outdoor Exposure	14-day Saltwater Immersion Test	
		Hydro-Service®
		Nickel-Plated
		Carbon Steel
After 60 days of outdoor exposure, Hydro-Service® demonstrates the rust resistance that makes it the chain of choice.	After 14 days in and out of 5% saltwater solution (equivalent to sea water), Hydro-Service® clearly outlasts nickel-plated and carbon steel chain.	

Put Hydro-Service® to Work

- Packaging
- Food processing
- Bottling
- Sea water environments
- Meat and poultry processing plants
- Vegetable processing plants
- Seafood processing plants
- Washdown equipment
- Outdoor applications

Hydro-Service®
Superior corrosion resistance for chains

Hydro-Service® Chain

Renold Hydro-Service® chains are treated with a mechanical zinc-plating process plus additional coatings for extra corrosion protection. This special coating offers corrosion resistance that is far superior to standard nickel or zinc plating and is ideal for wet, humid, saltwater, and other moisture-related applications. Hydro-Service® contains no hexavalent chromium, which means it is safe and environmentally friendly. All components are treated prior to assembly to achieve full coverage of all vital surfaces, which improves chain wear life and protects against corrosion-related pin and bush failures. This extremely durable coating will not chip or peel for long-term, exceptional corrosion protection.

4 Hydro-Service® Chain

Hydro-Service® Double Pitch conveyor chains are ideally suited for light- to medium-duty applications that require superior corrosion protection, such as in wet, humid, saltwater, and other moisture-related applications. These chains are available in the C2000 (standard roller) and C2002 (large roller) series. C2000 series link plates are straight and unbeveled and the construction of the roller and link plates are identical to improve sliding wear properties. C2002 series chains have large (oversize) rollers that minimize friction across the supporting surface to reduce wear and power requirements in heavier-duty applications.

Dimensions are in inches unless otherwise indicated.

Renold Stainless Steel roller chains are manufactured using Class-300 series stainless steel. These chains are ideal in acidic or alkaline environments, or when the chain will be exposed to water, and in very high or very low temperatures, where resistance to corrosion is a requirement.

Choose Renold Stainless Steel chain when resistance to chemical action is critical. The chain is manufactured using FDA-approved material and is prelubricated with USDA H-approved lubricant.

*Rollerless Chain

Nickel-Plated British Standard roller chain is made in accordance with ISO 606 B, BS 228, and DIN 8187 European standards. These chains resemble standard ANSI roller chains, but are dimensionally different and in general do NOT operate over standard ANSI sprockets. Renold Nickel-Plated British Standard roller chains are made with the same unique features and incorporate all the design advantages of Nickel-Plated ANSI chains.

Nickel-Plated British Standard Single-Strand Roller Chain

Nickel-Plated Chain

Renold Nickel-Plated Double Pitch conveyor chains are ideally suited for light- to medium-duty applications in outdoor and mildly corrosive environments. These chains are available in the C2000 (standard roller) and C2002 (large roller) series. C2000 series link plates are straight and unbeveled and the construction of the roller and link plates are identical to improve sliding wear properties. C2002 series chains have large (oversize) rollers that minimize friction across the supporting surface to reduce wear and power requirements in heavier-duty applications.
